TECHNICAL DATA SHEET

EM 1476 40% Active Emulsion of a High MW Polydimethylsiloxane

Description

This product is an industrial anionic polydimethylsiloxane emulsion

Key Features

Excellent dilution and freeze-thaw stability

Superior presistance

Excellent wetting/spreading with improved deposition on

Can be formulated with reactive additives

Key Applications

Release agent

Auto care

Leather conditioning

Rubber treatment

Application

EM 1476 is a 40% active anionic emulsion of 250,000 cSt polydimethylsiloxane. The high molecular weight dimethicone emulsion demonstrates excellent dilution stability at very low

concentrations and is chemically inert. This emulsion was

developed as an effective release agent for a variety of applications. EM 1476 is specially formulated to be used in many industrial mold release applications. This product has also proven to be an effective lubricant and hydrophobic agent when formulated into a coating application.

Use and Cure Information

To optimize the dispersion of this emulsion into the final formulation, it is recommended to add it slowly at the end of the procedure at a temperature below 40 °C (104 °F) with continuous mixing or stirring.

Read product and safety data sheets before handling this product for physical and health hazard information. The safety data sheet is available from your CHT representative.

Limitations

This product is not intended for pharmaceutical use.
